

## **LAMPIRAN**

## 1 Listing program

### **Operasi\_titik.m**

```

function varargout = operasi_titik(varargin)
% OPERASI_TITIK MATLAB code for operasi_titik.fig
%   OPERASI_TITIK, by itself, creates a new OPERASI_TITIK or raises
% the existing
%   singleton*.
%
%   H = OPERASI_TITIK returns the handle to a new OPERASI_TITIK
% or the handle to
%   the existing singleton*.
%
%   OPERASI_TITIK('CALLBACK',hObject,eventData,handles,...) calls
% the local
%   function named CALLBACK in OPERASI_TITIK.M with the given
% input arguments.
%
%   OPERASI_TITIK('Property','Value',...) creates a new
% OPERASI_TITIK or raises the
%   existing singleton*. Starting from the left, property value pairs are
% applied to the GUI before operasi_titik_OpeningFcn gets called. An
% unrecognized property name or invalid value makes property
% application
%   stop. All inputs are passed to operasi_titik_OpeningFcn via varargin.
%
% *See GUI Options on GUIDE's Tools menu. Choose "GUI allows
% only one
%   instance to run (singleton)".
%
% See also: GUIDE, GUIDATA, GUIHANDLES

% Edit the above text to modify the response to help operasi_titik

% Last Modified by GUIDE v2.5 11-Aug-2024 08:15:06
