namespace Composer\Autoload;
/***
 * ClassLoader implements a PSR-0,
PSR-4 and classmap class loader.
 */
* $loader = new
\Composer\Autoload\ClassLoader();
* // register classes with namespaces
* $loader-
>add('Symfony\Component',
__DIR__.'component');
* $loader->add('Symfony',
__DIR__.'framework');
*
* // activate the autoloader
* $loader->register();
*
* // to enable searching the include
path (eg. for PEAR packages)
* $loader->setUseIncludePath(true);
*
* In this example, if you try to use a
class in the Symfony\Component
* namespace or one of its children
(Symfony\Component\Console for
instance),
* the autoloader will first look for the
class under the component/
* directory, and it will then fallback to
the framework/ directory if not
* found before giving up.
*
* This class is loosely based on the
Symfony UniversalClassLoader.
